

Utility Services and WizNucleus Announce the Development of TrakER™, an Online Administrative Tracking Software

TrakER™ can be enabled to efficiently manage and track an entity's NERC and other regulatory requirements across their organizations.

FOR IMMEDIATE RELEASE: January 24, 2020

Waterbury, VT and New York, NY (January 24, 2020) -- Today, Utility Services, Inc. of Waterbury, Vermont, and [WizNucleus](#) of New York have announced the creation of an online administrative software application that monitors, tracks, and manages requirements, such as those outlined in the North American Electric Reliability Corporation (NERC) standards. The software application will provide companies and its users the ability to administer their programs and demonstrate how they met their performance obligations as outlined in standards applicable to them. TrakER™ software simplifies the tracking and management of personnel and other resources throughout their operations, planning, and cyber infrastructure obligations. The tool has built-in logic to utilize a company's processes to assist in the tracking and monitoring and can help demonstrate their internal controls.

The TrakER™ software comes with easy-to-use tracking functionality, including a dashboard that gives the users up-to-date information and guidance, including information on the work performed, pending activities, start dates, and completion details. The software also has

color-coded status indicator and alerting to give the user the information on their work efforts. Additionally, TrakER™ provides details on the individuals identified in their respective performance requirements and the status of those individuals' work efforts. TrakER™ also can be pre-configured with workflows for escalation of tasks where and when necessary.

TrakER™ software will be commercially available to customers during Q1 of this year.

About Utility Services: Utility Services is a service organization primarily offering assistance of the in the areas of, reliability, and security programs as administered by NERC other regulatory agencies. Our work helps organizations with their registration, ongoing performance including developing understanding of the individual standards and requirements, reliability efforts towards meeting reporting requirements, and assists on developing and helping to implement physical and cyber based security programs and protocols. <http://www.utilitysvcs.com/>

About WizNucleus: WizNucleus develops, markets and supports a suite of cyber security compliance software. WizNucleus' flagship software platform, Cyberwiz-Pro is used by nuclear power plants and electric utilities customers to manage their cyber security compliance programs, including NERC CIP and the nuclear industry's cyber security program. In a single and fully integrated platform, Cyberwiz-Pro delivers security controls assessment, configuration management, change control, compliance tracking and vulnerability assessment. <http://wiznucleus.com/about-us/>
